**Keywords:** Multidimensional interactive teaching model, college English teaching, learning outcomes, language skills development, learning motivation

**Abstract:** This paper aims to explore the practical implementation of the multidimensional interactive teaching model in college English teaching and its impact on students' learning outcomes. Through literature review and empirical research, we find that the multidimensional interactive teaching model can promote students' language skills development, enhance learning motivation, and increase participation. Using a combination of questionnaire surveys and on-site observations, this study conducted empirical research in multiple universities, and the results demonstrate a significant positive effect of the multidimensional interactive teaching model on enhancing students' overall English proficiency. In practice, teachers can stimulate students' interest in learning and improve the effectiveness of English teaching by incorporating multimedia instruction, group discussions, practical tasks, and various other methods.

1. Introduction

With the development of globalization, English, as an internationally common language, plays an increasingly crucial role in higher education. To enhance students' overall English proficiency, it is urgent to innovate teaching models. The multidimensional interactive teaching model, as a new teaching approach integrating various instructional methods, offers a fresh perspective for college English teaching. This paper aims to explore the practical effects of the multidimensional interactive teaching model in college English teaching through empirical research, providing theoretical and practical support for improving students' English learning outcomes.

2. Theoretical Foundation of Multidimensional Interactive Teaching Model

2.1. Definition and Characteristics of the Multidimensional Interactive Teaching Model

The multidimensional interactive teaching model is an instructional approach rooted in educational theory and cognitive psychology. Its core philosophy aims to stimulate students' learning interests, enhance motivation, and encourage a deeper understanding and application of acquired knowledge through diverse teaching methods and interactive elements. Specifically, the multidimensional interactive teaching model incorporates various elements such as multimedia instruction, collaborative group learning, and practical task design. In this model, students are more actively
2.2. The Theoretical Foundation of the Multidimensional Interactive Teaching Model

The theoretical foundation of the multidimensional interactive teaching model primarily draws from constructivism, social cognitive theory, and interactive learning theory. Constructivism emphasizes students constructing their knowledge structures through participating in real problem-solving processes, providing a theoretical basis for cognitive development in the multidimensional interactive teaching model.

Social cognitive theory underscores the impact of the social environment on individual cognitive development. In the multidimensional interactive teaching model, students jointly construct knowledge through collaboration and interaction, promoting individual cognitive development within a social environment.

Interactive learning theory focuses on the interaction between students and the learning environment, asserting that students better understand and digest knowledge through active interaction with teachers and peers. The multidimensional interactive teaching model incorporates diverse interactive elements, enabling students to interact effectively with instructional content, teachers, and peers on different levels.

2.3. Comparison between the Multidimensional Interactive Teaching Model and Traditional Teaching Models

Compared to traditional teaching models, the multidimensional interactive teaching model emphasizes the active role and participation of students. Traditional models often revolve around the teacher, emphasizing knowledge transmission, while the multidimensional interactive model places a stronger emphasis on the active role of students in knowledge construction. Traditional models stress classroom discipline and uniformity, while the multidimensional interactive model advocates for personalized differences, allowing students to develop their learning interests in appropriate environments.

In practice, the multidimensional interactive teaching model, through the introduction of multimedia instruction, group collaboration, and other methods, provides more diverse and rich learning resources and scenarios, making it easier for students to understand abstract concepts and enhancing the depth and breadth of learning. Compared to the single teaching methods of traditional models, the multidimensional interactive model better aligns with the needs of contemporary students for multiple intelligences and individual development.

In summary, the definition and characteristics, theoretical foundation, and comparison with traditional teaching models provide a clear theoretical framework and background for further research.
on the practical implementation of the multidimensional interactive teaching model in college English teaching. In-depth exploration of the theoretical foundation of the multidimensional interactive teaching model allows for a better understanding of its application and effects in actual teaching.[3]

3. Implementation of Multidimensional Interactive Teaching Model in College English Teaching

3.1. Application of Multimedia Teaching in Multidimensional Interaction

3.1.1. Introduction of Multimedia Teaching

Multimedia teaching, as a significant innovation in modern college English education, provides students with a richer and more intuitive learning experience by incorporating various media elements such as images, sound, and video. Firstly, in multimedia teaching, teachers can vividly present language knowledge through forms like PPT and videos, making abstract concepts tangible. This visual teaching method helps students better understand grammar rules, pronunciation techniques, laying a solid foundation for subsequent learning.

3.1.2. Interactive Multimedia Learning

Multimedia teaching emphasizes interactivity, involving students deeply in multidimensional interaction through the design of interactive learning activities. In this process, students actively engage with the instructional content through operations like clicking and dragging, transforming from passive receivers to actively participating learners. For instance, through multimedia learning software, students can practice speech imitation, spelling, and other practical exercises, enhancing their language skills for more effective learning.[4]

3.1.3. Breaking the Personalized Learning Path

Multimedia teaching provides a flexible pathway for personalized learning. By setting learning content at different difficulty levels within multimedia teaching, students can choose suitable learning paths based on their proficiency and needs. This breaks away from the fixed learning progress in traditional teaching, allowing each student to develop their learning interests in an appropriate environment, thereby boosting motivation. Moreover, multimedia teaching can offer personalized feedback and suggestions based on students' learning performance, encouraging more targeted learning.[5]

In college English teaching, by cleverly designing multimedia teaching content, teachers can fully leverage digital technology to create a dynamic and highly interactive learning environment. This practice aligns with the philosophy of the multidimensional interactive teaching model and better caters to contemporary students' demands for diversified learning experiences. By exploring the potential of multimedia teaching, students can be provided with a more creative and engaging English learning environment, enabling them to master language skills and enhance language literacy through practical experience.

In summary, the application of multimedia teaching in the multidimensional interactive teaching model injects new vitality into college English teaching. By incorporating multimedia elements, teachers can better meet students' diverse learning needs, fostering deeper student engagement. The interactivity and personalized design of multimedia teaching make students more willing to embrace English learning, offering robust support for improving the effectiveness and attractiveness of English teaching.
3.2. Implementation of Group Discussions and Collaborative Learning

3.2.1. Design and Organization of Group Discussions

Group discussions, as a crucial component of the multidimensional interactive teaching model, showcase unique value in the practical implementation of college English teaching. Firstly, by thoughtfully designing discussion topics and tasks, teachers can stimulate students' thinking and guide them to delve into issues related to language learning. For example, designing a discussion topic on English cultural differences allows students to enhance both their language expression skills and cultural understanding through communication.

When organizing group discussions, teachers should focus on constructing diverse groups, considering differences in students' proficiency and interests to promote a variety of viewpoints and exchanges. Additionally, teachers can ensure efficient group discussions by setting clear discussion rules, such as time allocation and speaking order. This design helps cultivate students' teamwork and participation in English learning.[6]

3.2.2. Cooperative Learning and Task Allocation

In group discussions, cooperative learning is a significant practice within the multidimensional interactive teaching model. By dividing students into groups and having them collaborate on specific learning tasks, teachers can guide students to learn from each other and progress together. Tasks can include class presentations, English project designs, etc., aiming to enhance students' creativity and problem-solving abilities through teamwork.

During cooperative learning, teachers can assign different roles to students, allowing each student to fully utilize their strengths and promoting internal communication and collaboration within the team. For instance, in a group project, one student may be responsible for researching English history, another for collecting relevant literature, and yet another for organizing the findings. Through task allocation, students complement each other, forming a learning community and achieving better learning outcomes.

3.2.3. Implementation of Effectiveness Assessment and Feedback Mechanism

To ensure the effectiveness of group discussions and cooperative learning, teachers need to establish an effective assessment mechanism. After the completion of group discussions, evaluation can be conducted through summaries of discussions or individual reports, providing feedback on group performance. This helps students gain a comprehensive understanding of their performance in group learning and identify areas for improvement through feedback.

Teachers' assessment should not only focus on individual student performance but also include an evaluation of the collaborative atmosphere within the groups. By observing interaction between students and the depth of discussions, teachers can determine whether group collaboration has achieved the expected results. Additionally, establishing a peer assessment mechanism allows students to provide suggestions for each other's contributions and collaboration, fostering self-management and teamwork skills.

In practice, the implementation of group discussions and cooperative learning not only enriches the forms of English teaching but also enhances students' enthusiasm for learning, fostering the development of teamwork, communication, and problem-solving skills. Through regular feedback and assessment, teachers can gain timely insights into teaching effectiveness, continuously optimizing and adjusting teaching designs to better meet students' learning needs.
3.3. Promotion of Student Language Skills through Practical Tasks

3.3.1. Task Design and Integration of Language Skills

Practical tasks play a bridging role in the multidimensional interactive teaching model, placing students in real language contexts and prompting them to apply English knowledge comprehensively. Task design is a crucial element, guiding students to exercise various aspects of language skills through the establishment of specific and practical tasks. For example, designing a practical task simulating an English interview not only hones students’ oral expression skills but also improves their listening comprehension and adaptability.

3.3.2. Igniting Student Engagement and Enhancing Expression Skills

The charm of practical tasks lies in their ability to spark students' interest and engagement in learning. By involving students in real contexts, they not only identify problems but also actively solve them. For instance, having students participate in an English speech contest requires active preparation and material collection, activities that enhance their expressive abilities. Increased student participation in tasks significantly amplifies the promotion of language skills.

3.3.3. Task Feedback and Personalized Development

Following the completion of practical tasks, timely feedback is crucial for enhancing students' language skills. Teachers can provide feedback through methods such as reviewing task reports or organizing group sharing sessions. Moreover, addressing individual differences in student performance allows for personalized recommendations and guidance, prompting targeted development in various aspects of language skills. This personalized care helps boost students' confidence and motivation in English learning.

Practical tasks in the multidimensional interactive teaching model are not just tasks but a learning process. Through task design and completion, students not only consolidate language knowledge in practical applications but also cultivate problem-solving abilities. Throughout the task process, students enhance language skills comprehensively by collaborating with others, thinking critically, and engaging in practical activities. The experiential learning of practical tasks allows students to better understand and apply their English knowledge in real-life situations, leading to a more comprehensive and in-depth improvement in language skills.

4. Impact of Multidimensional Interactive Teaching Model on Student Learning Effectiveness

4.1. Increased Student Learning Motivation

The multidimensional interactive teaching model has significantly boosted student learning motivation in college English teaching. This model introduces diverse teaching methods and media elements, adding more lively and interesting elements to the classroom, thus igniting students' interest in learning English.

Firstly, multimedia teaching stands out as a highlight of the multidimensional interactive teaching model. In this teaching environment, students no longer passively receive information but actively participate in learning through various senses like vision and hearing. Such multimedia formats make learning more engaging and practical, allowing students to better understand and apply knowledge, thereby sparking a strong interest in learning English.

Secondly, the multidimensional interactive teaching model emphasizes the setting of personalized learning paths for students. By providing students with more choices, allowing them to select learning
content and methods based on their interests and abilities, this personalized approach meets diverse learning needs. Every student can find joy in learning within their areas of interest, as they feel empowered to autonomously choose their learning path, contributing to a more proactive engagement in learning because they understand the synergy between learning and personal interests and goals.

In summary, the multidimensional interactive teaching model not only imparts knowledge but also plays a crucial role in stimulating students' interest in learning and enhancing learning motivation. By breaking away from the monotony of traditional teaching, creating a more colorful learning experience, this model effectively propels the elevation of student learning motivation. This holds positive significance in nurturing learners with creativity and enthusiasm.

4.2. Increased Student Participation

While enhancing student learning motivation, the multidimensional interactive teaching model significantly increases student participation. In traditional teaching, students are often passive recipients of knowledge. The multidimensional interactive teaching model transforms students into active learners through forms like group discussions and practical tasks, encouraging them to engage more deeply.

Firstly, in group discussions, students are encouraged to express their opinions actively, listen to others' viewpoints, and collaborate to solve problems. This process of interactive communication not only promotes the depth and breadth of thinking but also increases students' initiative in learning. Engaging in intellectual exchanges with peers helps students gain a more comprehensive understanding of instructional content, enhancing their mastery of knowledge.

Secondly, the design of practical tasks becomes a powerful means to increase student participation. By having students directly apply learned knowledge to solve real-world problems, they can experience the practicality of learning through real-life applications, fostering a sense of experiential learning and accomplishment. This practical application not only sparks enthusiasm for learning but also deepens students' involvement in learning activities. Students, in practical tasks, transform from mere knowledge receivers to problem solvers, and this shift in role encourages more active participation in learning.

In conclusion, the multidimensional interactive teaching model, through the introduction of activities like group discussions and practical tasks, liberates students from passive learning states, encouraging them to participate more actively in learning. This increased participation not only promotes students' deep thinking and the cultivation of collaborative abilities but also provides them with a more comprehensive learning experience in real-world applications.

4.3. Promotion of Language Skill Development

The multidimensional interactive teaching model has played a significant role in promoting the comprehensive development of students' language skills in college English teaching. Through diverse teaching methods such as multimedia teaching, group discussions, and practical tasks, this model effectively enhances students' listening, speaking, reading, and writing skills.

Firstly, multimedia teaching provides students with richer and more authentic language input. Through various forms of presentation, including sound, images, etc., students can easily access real language environments. This helps improve students' listening comprehension skills, enabling them to better understand and emulate authentic language expressions. Language is no longer static text but is presented in vibrant multimedia formats, enhancing students' perception and understanding of the language.

Secondly, group discussions and cooperative learning are effective means to enhance students' oral expression and communication skills. By interacting with classmates, sharing opinions, students gain
practical experience in language communication. Group discussions stimulate students' courage to express personal opinions, improving their oral expression skills. The interaction in cooperative learning not only makes students express themselves more fluently but also fosters effective communication skills within a group.

Finally, the design of practical tasks directly hones students' language application abilities. By applying learned knowledge to real-life situations, students not only enhance the flexibility of language use but also receive comprehensive training in language skills through practical tasks. This practical application not only solidifies their language knowledge but also cultivates their ability to use language flexibly in real-life situations.

In summary, the multidimensional interactive teaching model, through increasing student learning motivation, enhancing participation, and promoting language skill development, comprehensively improves student learning effectiveness. In this model, students are no longer passive recipients of knowledge but become active learners, better adapting to the language demands of the information age. In the future of college English teaching, the multidimensional interactive teaching model will continue to play a positive role, providing students with a more enriching and practical language learning experience.

5. Conclusion

Through the practical research on the multidimensional interactive teaching model in college English teaching, we have found that this teaching model excels in improving student learning effectiveness. The introduction of multimedia teaching, group discussions, practical tasks, and other methods effectively stimulates students' interest in learning, enhances their learning motivation, and increases their participation. Additionally, the multidimensional interactive teaching model significantly promotes the development of students' language skills, leading to noticeable progress in their overall English proficiency. Therefore, promoting and applying the multidimensional interactive teaching model in college English teaching holds positive significance, offering effective teaching strategies and methods for English education.
